

Planet Joy is a world hiding in plain site, a world in our own homes that we've been too busy to notice. Every week, exciting creatures, unique buildings, and strange objects will be released! You can use these instructions to re-build them yourself, using any material you have, even waste! Don't forget to send us a snap!

If you didn't print this, a kind neighbour of yours decided to print an extra copy of these instructions and bring it to you!

Story:

Carer Center for Climate Change is a fundamental institution of Planet Joy. Creatures working here take care of the weather and check on how its variations are affecting the planet and its inhabitants. Their goal is to protect their beloved planet.

Materials:

A carboard box and some extra pieces, a rectangular piece of plastic, a plastic bottle cap, some used paper, tape, a piece of foil and some markers.

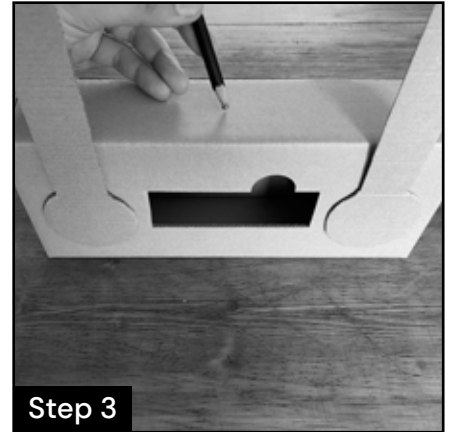

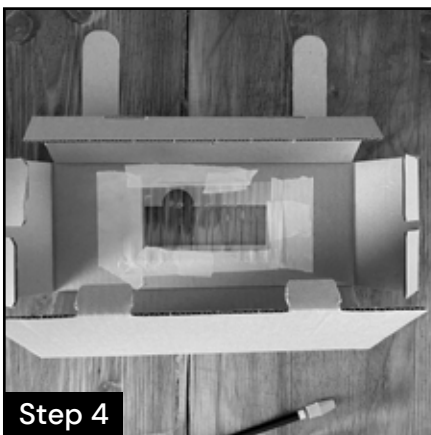

Step 1
Cut out a rectangular and a circular hole from the front of the box.

Step 2
Cut out 2 identical thermometer shapes using some extra cardboard and attach them to the front of the box.

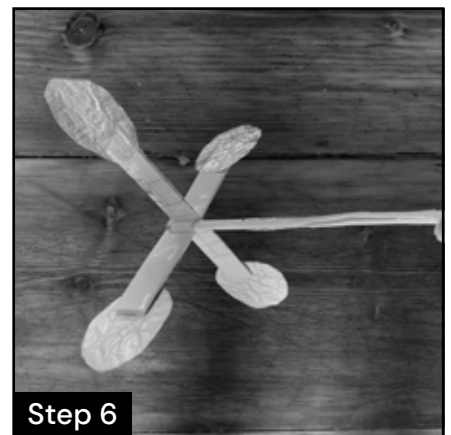

Step 3
Punch a hole on the top of the box, exactly in the middle.

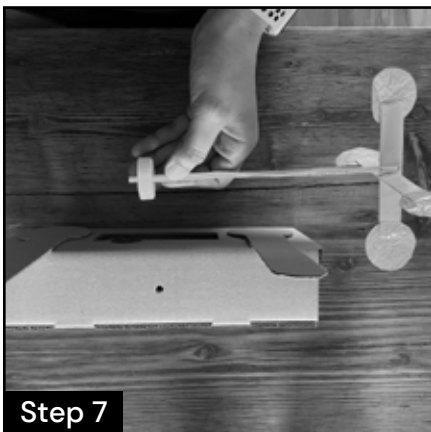

Step 4
Use a piece of plastic to close the two initial holes of the box. You can attach it on the inside of the box using tape.

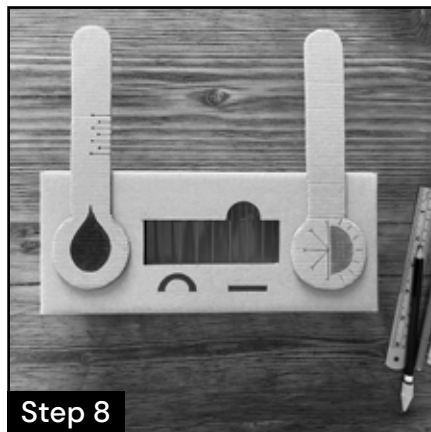

Step 5
Cut 4 circles out of foil, and punch a hole in the cap. Using the paper, create a dowel and 2 flat rectangles. Use tape to make them robust.

Step 6
Attach the foil circles to the rectangles. Insert one rectangle into the other and attach them to the dowel with tape.

Step 7
Fix the dowel to the hole in the bottle cap, and fix the structure to the hole on the top of the box.

Step 8
Decorate the front of the box as you prefer.
