joy
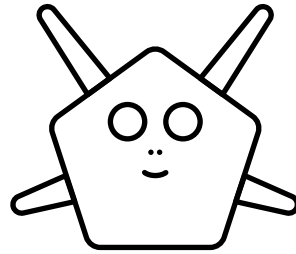

Planet Joy is a world hiding in plain site, a world in our own homes that we've been too busy to notice. Every week, exciting creatures, unique buildings, and strange objects will be released! You can use these instructions to re-build them yourself, using any material you have, even waste! Don't forget to send us a snap!

♡

If you didn't print this, a kind neighbour of yours decided to print an extra copy of these instructions and bring it to you!

Name:
Smasha

Creator:
Matteo Bandi
www.matteobandidesign.com
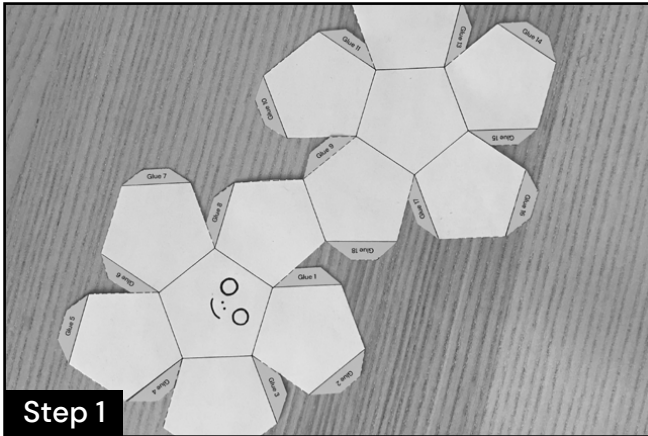

Story:
Do you really think the oven breaking, the vase falling on the floor or the earphones tangling up were all coincidences? Probably not. Smasha is a lovely and very clumsy friend, who just happens to enjoy chilling next to the most fragile things in the house.
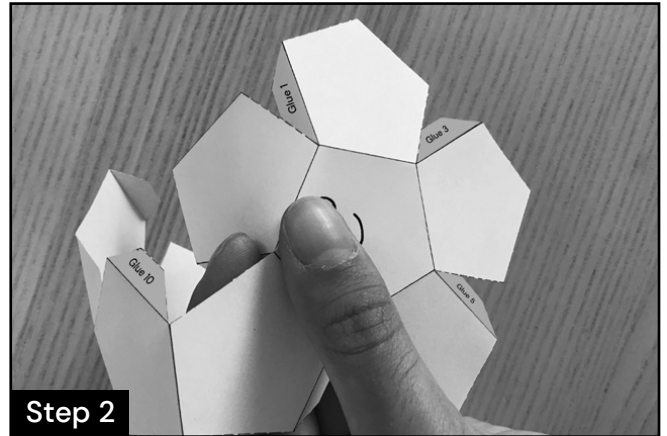

Materials:
Template from this document, scissors, stick glue, strong glue, unused wall plugs.

joy

Step 1

Start by cutting the template you find in this document. It will become Smasha's body.

Step 2

Fold inward all the solid lines you see.

Step 3

Once all lines are folded, start glue everything together following the number on the flaps!

Step 4

Before closing Smasha completely, put a little weight inside for stability. I've used a tiny stone.

Step 5

Add some wall plugs to create the spikes.
Remeber, don't use anything pointy!
